

Curriculum Vitae

Name: Ji-Seon Ahn

Education

Mar.2008 – : B.S. in School of Biological Sciences and Technology,
Chonnam National University

Bibliography

1. Mi-Yeon Kim, Jung-Soon Mo, Eun-Jung Ann, Ji-Hye Yoon, Jane Jung, Yun-Hee Choi, Su-Man Kim, Hwa-Young Kim, **Ji-Seon Ahn**, Hangun Kim, Kwonseop Kim, Hyang-Sook Hoe and Hee-Sae Park, Regulation of Notch1 signaling by APP intracellular domain facilitates the protein degradation of the Notch1 intracellular domain and RBP-jK. *Journal of Cell Science*, in press
2. Jung-Soon Mo, Eun-Jung Ann, Ji-Hye Yoon, Jane Jung, Yun-Hee Choi, Hwa-Young Kim, **Ji-Seon Ahn**, Su-Man Kim, Mi-Yeon Kim, Ji-Ae Hong, Mi-Sun Seo, Florian Lang, Eui-Ju Choi, and Hee-Sae Park, Serum- and glucocorticoid-inducible Kinase1 (SGK1) controls Notch1 signaling by down-regulation of protein stability through Fbw7 ubiquitin ligase. *J Cell Sci.* 124:100-112 (2011)

Conferences

1. DJ-1 Directly Inhibits the Homodimerization of Apoptosis Signal-Regulating Kinase 1.
The Korean Society for Molecular and Cellular Biology, Feb 2011
2. Serum- and Glucocorticoid-Inducible Kinase 1 (SGK1) Dependent Phosphorylation Regulates Fbw7 E3 Ligase Activity.
The Korean Society for Molecular and Cellular Biology, Feb 2011
3. JIP1 Binding to RBP-Jk Mediates Crosstalk between the Notch1 and JIP1-JNK Signaling Pathway.
The Korean Society for Molecular and Cellular Biology, Feb 2011

4. Regulation of Notch1 Signaling by APP Intracellular Domain Facilitates the Protein Degradation of the Notch1 Intracellular Domain and RBP-Jk.

The Korean Society for Molecular and Cellular Biology, Feb 2011

5. Notch-RBP-Jk signaling cross-talk with JIP1-JNK signaling pathway.

The Korean Society for Molecular and Cellular Biology, Oct 2010

6. Runx2 is an inhibitor of the Notch1 signaling pathway during normal osteoblast differentiation.

The Korean Society for Molecular and Cellular Biology, Oct 2010

7. DJ-1 binds ASK1 to inhibit ASK1-p38 MAPK kinase activity.

The Korean Society for Molecular and Cellular Biology, Oct 2010

8. Serum- and glucocorticoid-inducible Kinase1 (SGK1) phosphorylates Fbw7 and promotes its ubiquitin E3 ligase activity.

The Korean Society for Molecular and Cellular Biology, Oct 2010
